SUMMARY

Flutter Developer and Computer Science graduate with strong experience in building scalable cross-platform mobile applications using clean architecture and modern state management techniques. Hands-on experience with Firebase, RESTful APIs, and production-ready app deployment. Currently training as an Agentic AI Developer at the National Technology Institute (NTI), with a growing focus on LLM-based systems and intelligent applications. Passionate about continuous learning, problem-solving, and bridging mobile development with AI-powered solutions.

EDUCATION

Faculty of Computers and Artificial Intelligence, MTI University
Bachelor's Degree in Computer Science

Cairo, Egypt
2021 – 2025

WORK EXPERIENCE

National Technology Institute (NTI)
Trainee – Agentic AI Developer

Smart Village, Egypt
Jan. 2026 – Present

- Completed 132 hours of professional development training focused on business communication, leadership, project management, and teamwork within a structured national training program.
- Participated in team-based activities and a capstone presentation demonstrating effective collaboration, communication, and problem-solving skills in a professional environment.
- Currently enrolled in the program, with the technical Agentic AI and LLM-focused training phase upcoming.

Freelance Flutter Developer
Flutter Developer

Remote
2024 – Present

- Developed and maintained cross-platform mobile applications using Flutter and Dart.
- Built Cash Flow App for personal finance management with income and expense tracking.
- Integrated Firebase services including Authentication, Firestore, and Storage.
- Applied clean architecture principles and Bloc/Provider for scalable state management.

PROJECTS

Code-M8 – Autonomous Coding Agent | *Python, LangChain, Neo4j, LLM APIs*

- Built a terminal-based autonomous AI coding assistant using a multi-agent architecture.
- Designed a GraphRAG pipeline using AST-based chunking, Neo4j knowledge graphs, and vector similarity retrieval.
- Implemented iterative graph traversal with LLM-generated queries for deeper code understanding.
- Developed an orchestrator agent to classify intent, plan execution, and delegate tasks to specialized agents.

VQA Mobile App (Visual Question Answering) | *Flutter, AI, Firebase*

[GitHub](#)

- Developed an AI-powered mobile application that answers questions about uploaded or captured images.
- Integrated Flask-based AI backend with Firebase Firestore, Storage, and Authentication.
- Implemented history tracking for previous questions and related images.

Islami App | *Flutter, APIs, Animations*

[GitHub](#)

- Built a comprehensive Islamic application including Quran, Hadith, Tasbeeh, and Quran Radio.
- Used animations and external APIs to enhance user experience.

News App | *Flutter, MVVM, Clean Architecture*

[GitHub](#)

- Developed a real-time news application with multiple categories using RESTful APIs.
- Applied MVVM and clean architecture principles for maintainable codebase.

E-Commerce App | *Flutter, Bloc, Clean Architecture*

- Built an online shopping application using Bloc for state management.
- Implemented clean architecture and RESTful API integration.

SKILLS

Programming Languages: Dart, C++, Python

AI & Machine Learning: Machine Learning, Deep Learning, Natural Language Processing (NLP), RAG (Retrieval-Augmented Generation), LangChain, LLMs, Prompt Engineering

Mobile Development: Flutter, Clean Architecture, MVVM

State Management: Riverpod, Bloc, Provider

Backend & APIs: RESTful APIs, Firebase (Auth, Firestore, FCM, Storage)

Databases: Firebase Firestore, Neo4j

Tools & Platforms: Git, Google Maps, Push Notifications, AdMob

Core Concepts: OOP, SOLID Principles, Design Patterns, Data Structures, Algorithms

Languages: English (B2), German (Elementary)

Soft Skills: Communication, Teamwork, Time Management, Adaptability, Self-Learning, Creativity
